Pipe Handlers by Steve Vick International

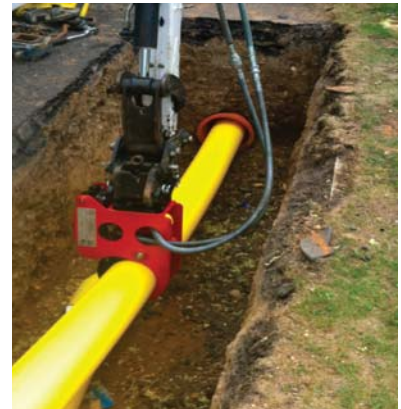

The Pipe Handlers are excavator attachments for inserting PE pipe into live or dead mains as a safe and cost effective alternative to manual labor, winches or slings.

Efficient: Easily grips and maneuvers the PE into the host pipe seamlessly without damage.

Fast: Capable of pushing pipe up to 33 feet per minute to lengths 1,600 feet or more.

Safe: The entire operation is controlled from the cab. Never requires workers to handle the pipe or enter the trench.

- *Multi pin locations to easily adapt to fit most excavators with single or dual flow hydraulics.*
- *J-shaped jaw design offers superior control. Pushing action can be reversed.*
- *Inner clamping shells prevents pipe damage and slipping in wet weather.*

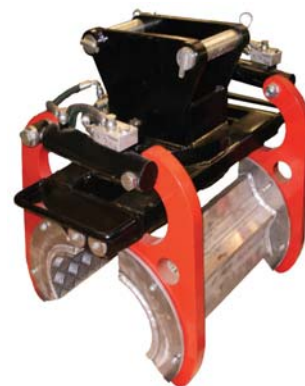

5 Models are Available for 2" through 24" PE Pipe.

Mini Pipe Handler
2"-4"

Midi Pipe Handler
6" Pipe Only

Pipe Handler
3 Different Models
6"-12", 16"-20" & 24"
