## Dresser Style 90 & NORMAC Compression Coupling Encapsulation

Permanently seal leaks on 3/4" to 2" metallic compression type couplings.

- Thousands have already been installed, saving millions of dollars.
- Simple, safe, permanent and very economical.
- Installed in traditional excavations or keyhole excavations using long-handled tools.
- Avoids costly welded pumpkins.

Sealant passes British Gas LC8 specification and the Cornell University/Wyle Labs tests for the New York Gas Group and backed by PLCS exclusive 10-year warranty.

### Simple Installation

- Tighten compression nuts to stop the leak.
- Grit blast and prime repair area.

- Fit mold onto the coupling.
- Mix sealant, pour into the mold and fit cap.
- Can be backfilled immediately.

- Cured repair cross section shown for illustration.

*A Metal Mold System is also available. Used in traditional excavations where the leak cannot be stopped and will work against a maximum of 60 psi. in the main.*
